Please evaluate your team member on a 0-100% scale for each of the following items to the best of *your* ability. Justification for each of your ratings is required. First list your rating, then provide justification for that rating.

1. Present for team meetings and contributed to discussion
100%, was implementing most ideas while simultaneously talking with group.

2. Tasks assigned were completed in a timely fashion and with
good quality

100%, was adding extra elements even to the game after completing the essentials of what we needed from him.

3. Communicated well in person as well as electronically
100%, great communication via discord and video calls

4. Was genuinely interested in working on the project and homework and seeing
everything
succeed.

100%, Definitely cared about the assignment, did entire layout and science behind toString stuff.

5. Overall contribution to the project and homework as a whole

100%, couldn't have done it without him

Provide any general comments you feel necessary to further
describe your team member.

Awesome programmer, works really fast.

Would you like to work with this person again in the future?
Yes, absolutely.

Please evaluate your team member on a 0-100% scale for each of the following items to the best of *your* ability. Justification for each of your ratings is required. First list your rating, then provide justification for that rating.

1. Present for team meetings and contributed to discussion
95%, tough because Ian and I didn't work during the day so we could discuss for longer periods of time I feel like but I know he communicated with Ian a little more in the evenings. Was present in most significant meetings though.

2. Tasks assigned were completed in a timely fashion and with
good quality

100%, completed everything asked of him and added own flare

3. Communicated well in person as well as electronically

100% was able to talk once he was off work and always let us know what he was up to.

4. Was genuinely interested in working on the project and homework and seeing everything succeed.

95% I say 95 just because we encountered some problems towards the end debugging wise that would have been nice to have a third brain but he was also at work so idk.

5. Overall contribution to the project and homework as a whole

95%, same reason above

Provide any general comments you feel necessary to further describe your team member.

Smart and excellent coder

Would you like to work with this person again in the future?

Oh yeah still solid teammate, definitely would work with again.

1. Present for team meetings and contributed to discussion

100%, tried to be a spark plug in the beginning as I was afraid of procrastinating and having to do the whole project myself no knowing how my team members would be.

2. Tasks assigned were completed in a timely fashion and with good quality

100%, took care of what I needed to in a timely fashion

3. Communicated well in person as well as electronically

4. Was genuinely interested in working on the project and homework and seeing everything succeed.

100%, the guys at one point were so overwhelmed they were talking about just bombing it or whatever but I knew they were capable and just feeling overwhelmed so I just sat on a call with Ian for an entire day.

5. Overall contribution to the project and homework as a whole

95%, I dock myself bc Ian was blitzing through a lot of it, most of my contribution was just keeping us organized and trying to implement what designs patterns and code smells stuff we could. I know I missed some stuff because I spent a lot of time trying to implement flyWeight and making the action class and interface and we ended up

giving up on that and I'm bummed :(, but at least we tried and see how it could be beneficial.

Provide any general comments you feel necessary to further describe your team member.

The guys were comical in that I think they're both more fluent programmers than me, yet they were so overwhelmed at times it baffled me that they could think we were so far behind when watching them and seeing how fast they did things. I do things pretty slow and like to plan with something like a UML and work with a whiteboard before just diving in. I feel like when Ian was getting lost in some of the spaghetti code my diagrams really helped us.

Would you like to work with this person again in the future?
I have no other choice, so yes lol.
